50X1-HUM

THIS IS UNEVALUATED INFORMATION.

1. Near the end of March 1960 all the workers of the UZBEKKHIDMASH in Chirchik (N 41-29, E 69-35) were called by the plant management to an important meeting. At the meeting they were informed that beginning on 1 April 1960 the plant would change from an eight-hour to a seven-hour working day. The working hours for the three shifts would be as follows:

First shift: 0800 to 1600 (one hour for lunch)

Second shift: 1600 to 2330 (a half hour for dinner)

Third shift: 2330 to 0700 (a half hour for breakfast)

This change was announced as constituting a great step forward in the building of Communism and as a typical example of the care the Soviet Government gives to its working population.

2. Two days later an order of the UZBEKKHIDMASH management was posted [redacted] which stated that all workers, with only two exceptions, who were in the fifth or higher category, had been demoted to the third category. No explanation for this action was given by any one in authority. At the same time some manipulation of the work orders (naryady) took place with the result that after the introduction of the new time schedule every worker had lost about one third of his income. [redacted] a fifth category worker [redacted] receiving a salary of 1200 to 1400 rubles per month, after the change in working hours received about 900 to 1100 rubles per month. [redacted] the same thing had happened in the other shops of this plant.

3. All the workers suffered from these measures, and those who had been earning only 700 to 800 rubles a month were especially hard hit. The workers tried to increase their incomes by making arrangements with their foremen that would permit them to work eight or nine hours per day instead of seven. In many cases the request was granted. As a result the productivity of the plant increased and the plant was able to overfulfill its quota during the period from May to September 1960.

50X1-HUM

THIS IS UNEVALUATED INFORMATION.

1. The rate of production of compressors at UZBEKKHIMMASH in Chirchik (N 41-29, E 69-35) was the same in 1959 and in 1960. There were very slight variations from month to month in compressor production figures.

the plant was meeting its yearly quota.

50X1-HUM

2. The UZBEKKHIMMASH produced three types of compressors:

- a. A stationary compressor with a capacity of 300 hp. Two or three compressors of this type were produced monthly.

50X1-HUM

- b. A stationary compressor called a trombo kompressor² (sic). It was used to inject air into coke ovens. Two or three compressors of this type were produced monthly.

50X1-HUM

- c. A stationary compressor with a capacity of 800 hp. Only one or two compressors of this type were produced a year.
